

The logo for Apertus open source cinema is displayed in white text on a black background. The word 'APERTUS' is in a large, bold, sans-serif font, with 'open source cinema' in a smaller, lowercase sans-serif font below it. To the right of the text, there is a black and white photograph of a camera lens and other mechanical parts of a camera.

Letter of Support

Apertus – open source cinema (www.apertus.org) is a project to build a community driven digital cinema camera for a professional production environment.

Our community is spread over the entire globe with a big part of the members living in Europe. We would love to organize the first ever global Apertus meet up and invite the entire community to come to RMLL 2012 in Geneva. We would be able to contribute to RMLL by organising workshops, discussions and lectures about Apertus, digital cinema, free media production software as well as showing our camera prototypes and films shot with Apertus.

Geneva would be a perfect choice geographically as it is right in the center of Europe easily allowing all community members to travel to by train, car or airplane. Geneva is also well known beyond the borders of Europe and therefore it will also attract community members from the most distant places like Australia, North- and South America.
